Professional Summary

Machine Learning Engineer with hands-on experience designing intelligent software systems powered by LLMs, hybrid recommendation engines, and Retrieval-Augmented Generation (RAG). Skilled in building scalable end-to-end AI applications spanning data pipelines, model integration, REST APIs, and cloud-native development using Python, TypeScript, React, Next.js, NestJS, and PostgreSQL.

Technical Skills

Programming: Python, TypeScript, JavaScript, Java, C/C++

Artificial Intelligence: Machine Learning, Deep Learning, NLP, LLMs, RAG, Recommendation Systems, TensorFlow, PyTorch, Scikit-learn

Backend: Node.js, NestJS, Express.js, REST APIs

Frontend: React.js, Next.js, Tailwind CSS

Databases: MongoDB, PostgreSQL, Prisma ORM

DevOps & Tools: Docker, Git, GitHub Actions, Postman, VS Code, Linux

Projects

MovieSphere — Hybrid AI Movie Recommendation Platform

- Engineered a hybrid recommendation engine combining collaborative filtering, content-based filtering, learned user/item embeddings, and cosine similarity refinement to personalize results across a catalog of 10,000+ movies.
- Designed a cold-start strategy using genre preference modeling and metadata similarity to improve recommendations for new users.
- Built scalable REST APIs and optimized MongoDB query pipelines to serve real-time recommendations to 50+ active users.
- Delivered a production full-stack platform with authentication, watchlists, reviews, and ratings using React, Node.js, Express.js, MongoDB, and the TMDB API.

Evident — AI-Powered Real-Time Fact Verification Platform

- Architected an end-to-end AI verification platform that extracts factual claims from transcripts and validates them through evidence retrieval and explainable LLM-based reasoning.
- Designed a modular verification pipeline: claim extraction, normalization, evidence retrieval, conversational filtering, pronoun resolution, and explainable verdict generation.
- Implemented asynchronous job processing with BullMQ and Redis, including retry mechanisms and background workflow orchestration.
- Built a scalable Clean Architecture backend using NestJS, PostgreSQL, and Prisma ORM, following Domain-Driven Design principles.
- Established CI/CD pipelines with GitHub Actions running linting, builds, and 350+ automated regression tests for continuous quality assurance.

Experience

AI & Full Stack Development Intern

Dec 2025 – Jan 2026

CaveBeats Technologies

- Delivered production-ready MERN applications for 5+ client engagements, designing scalable React frontends and Node.js backend services.
- Developed secure RESTful APIs, authentication modules, and MongoDB data models for real-world business applications.
- Contributed to the AI engineering workflow of an early-stage voice-first dating platform by preparing training datasets, evaluating recommendation algorithms, and analyzing user behavior for intelligent matchmaking.
- Collaborated with cross-functional teams to deploy responsive, high-performance web applications across multiple production environments.

Full Stack Developer, Founding Team

Jun 2025 – Aug 2025

Devsamagri

- Led migration from Shopify to a custom MERN-based ecommerce platform supporting 200+ products and 50+ active customers.
- Designed RESTful APIs for inventory management, order processing, and payment workflows while improving maintainability through modular backend architecture.
- Optimized database operations and application performance to support growing online and offline business operations.
- Collaborated directly with founders to deliver production-ready features and improve operational efficiency.

Education

Manipal University Jaipur

2023 – 2027

B.Tech, Information Technology (Machine Learning)

CGPA: 8.54/10

Achievements

- Dean's List — Semester GPA 9.14
- Solved 130+ DSA problems on GeeksforGeeks
- Top 10% in a national coding contest (100,000+ participants)
