

Tanmaya Raghuwanshi

+91 8827670270 | tanmayaraghuwanshi@gmail.com | GitHub | LinkedIn | Portfolio

Professional Summary

Software Engineer with hands-on experience building scalable full-stack applications and backend systems using modern, production-grade architectures. Skilled in designing REST APIs, relational and NoSQL data models, and modular backends following Clean Architecture principles, using Python, TypeScript, React, Next.js, NestJS, PostgreSQL, and Docker. Strong foundation in data structures, algorithms, and system design, with experience integrating ML-driven features into production software.

Technical Skills

Programming: Python, TypeScript, JavaScript, Java, C/C++

Backend: Node.js, NestJS, Express.js, REST APIs, Microservices

Frontend: React.js, Next.js, Tailwind CSS

Databases: MongoDB, PostgreSQL, Prisma ORM

DevOps & Tools: Docker, Git, GitHub Actions, Postman, VS Code, Linux

Machine Learning: Recommendation Systems, LLM Integration, RAG, TensorFlow, PyTorch, Scikit-learn

Projects

MovieSphere — Full-Stack Movie Recommendation Platform

- Built a full-stack web platform integrating the TMDB API across a catalog of 10,000+ movies, serving 50+ active users.
- Designed and implemented REST APIs and optimized MongoDB query pipelines for low-latency data retrieval at scale.
- Implemented authentication, watchlists, reviews, and ratings features end-to-end across a production application.
- Built a hybrid recommendation module (collaborative and content-based filtering) as a pluggable service within the platform.

Evident — AI-Integrated Fact Verification Platform

- Architected a modular backend for a real-time verification platform using Clean Architecture and Domain-Driven Design principles.
- Built a NestJS, PostgreSQL, and Prisma ORM backend with dependency injection, layered services, and a well-defined domain model.
- Implemented asynchronous job processing with BullMQ and Redis, including retry logic and background orchestration for reliable pipeline execution.
- Established CI/CD pipelines with GitHub Actions covering linting, builds, and 350+ automated regression tests.
- Integrated an LLM-based verification step as one stage within a larger claim-processing pipeline.

Experience

Full Stack Development Intern

Dec 2025 – Jan 2026

CaveBeats Technologies

- Delivered production-ready MERN applications for 5+ client engagements, designing scalable React frontends and Node.js backend services.
- Developed secure RESTful APIs, authentication modules, and MongoDB data models for real-world business applications.
- Built responsive, cross-browser compatible user interfaces, improving performance and user experience across devices.
- Collaborated with cross-functional teams to deploy applications across multiple production environments.
- Supported AI engineering workflows for an early-stage voice-first dating platform, including dataset preparation and recommendation model evaluation.

Full Stack Developer, Founding Team

Jun 2025 – Aug 2025

Devsamagri

- Led migration from Shopify to a custom MERN-based ecommerce platform supporting 200+ products and 50+ active customers.
- Designed RESTful APIs for inventory management, order processing, and payment workflows while improving maintainability through modular backend architecture.
- Optimized database operations and application performance to support growing online and offline business operations.
- Collaborated directly with founders to deliver production-ready features and improve operational efficiency.

Education

Manipal University Jaipur

2023 – 2027

B.Tech, Information Technology (Machine Learning)

CGPA: 8.54/10

Achievements

- Dean's List — Semester GPA 9.14
- Solved 130+ DSA problems on GeeksforGeeks
- Top 10% in a national coding contest (100,000+ participants)
